# 1. Patch Release Notes (25.2.1)

## **Products and/or components updated with this patch**

OpenText™ ScanCentral Static Application Security Testing

# 1.1. New features

The following features have been added to this patch:

## **ScanCentral Controller**

- Tomcat server upgraded to version 10.1.43

## **ScanCentral Client**

- ScanCentral SAST client 25.2.1 can submit scan requests to specific versions of SAST sensors using the “--sast-version <version>” option

## 1.2. Fixed issues

The patch includes bug fixes and quality enhancements that improve application stability. This patch addressed the following issue:

### **ScanCentral Client**

Fixed an issue where scan requests initiated on Linux machines, containing multiple files with the same name but different case in the same location (allowed on case-sensitive OSes), were assigned to Windows sensors and failed due to duplicate files.

The scan requests are now assigned to Linux sensors.

## 1.3. Documentation

Added command line option to specify the OpenText SAST version to assign the remote translation and scan job. Use the latest versions of the documentation created for 25.2.1.
